CLAIMS

5 What is claimed is:

- 1. A process for manufacturing a thermoplastic article which comprises the steps:
 - a) Extrusion, blow molding one or more thermoplastic resins into a pre-form;
 - b) and stretch blow molding, said pre-form into a thermoplastic article.

10

 A process according to claim 1, wherein blow ratio between thermoplastic resin and pre-form is about 1.5:1 or greater.

15

3. A process according to claim 1, wherein wall thickness of said pre-form is uniformly within about 0.010 inches.

20

4.

A process according to claim 1, wherein multiple cavities are used in said extrusion, molding process.

25

5. A process according to claim 1, wherein wall thickness of said pre-form is about 0.06 inches to about 0.20 inches.

30

6. A process according to claim 1, wherein said pre-form is cooled prior to said stretch blow molding process.

5.

10

20

25

30

- 7. A process according to claim 1, wherein said thermoplastic resin is one or more resins selected from the group consisting of polypropylene, polyethylene, polyamide, and acrylonitrile.
- 8. A process according to claim 7, wherein said polypropylene is selected from the group consisting of a homopolymer of polypropylene, a copolymer of polypropylene, a clarified polypropylene, and a non-clarified polypropylene.
- 9. A process according to claim 1, wherein said thermoplastic article is clear.
- 10. A process according to claim 1, wherein said thermoplastic article is translucent or opaque.
 - 11. A process according to claim 1, wherein polymer molecules is said thermoplastic article are biaxially aligned.
 - 12. A thermoplastic pre-form comprised of one or more thermoplastic resins wherein said thermoplastic pre-form is manufactured by a process comprising the step of extrusion blow molding.
 - 13. A thermoplastic pre-form according to claim 12, wherein said thermoplastic resins are one or more resins selected from the group consisting of polypropylene, polyethylene, polyamide, and acrylonitrile.
 - 14. A thermoplastic article made by the process of claim 1.

5

- 15. A process according to claim 1, wherein blow length ratio is about 2.5:1 to about 3.5:1.
- 16. A process according to claim 1, wherein blow width ratio is about 2:1 to about 3:1.
